Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)
	10/810,898	OHKOUCHI ET AL.
	Examiner	Art Unit
	JYOTHSNA A. VENKAT Ph. D	1615

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 19 June 2007.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 12, 13 and 33 is/are pending in the application.
 - 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 12-13 and 33 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) <input type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413)
2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)	Paper No(s)/Mail Date. _____
3) <input type="checkbox"/> Information Disclosure Statement(s) (PTO/SB/08)	5) <input type="checkbox"/> Notice of Informal Patent Application
Paper No(s)/Mail Date _____.	6) <input type="checkbox"/> Other: _____.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/19/07 has been entered.

Claims 12-13 and 33 are pending in the application and the status of the application is as follows:

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all claims 12-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 90/46215 ('215).

The instant application is claiming a quickly disintegrating solid preparation comprising:

- a. An active ingredient*
- b. Sugar alcohol or saccharide with a mean particle diameter of 30-300 microns*
- c. Disintegrating agent (carmellose calcium, carboxymethylstarch sodium, croscarmellose sodium or crosspovidone)*
- d. Cellulose compound (crystalline cellulose, powder cellulose, low substituted hydroxy propyl cellulose or carmellose)*

WO '218 teaches all the claimed ingredients in rapidly dissolving dosage form. See the abstract, see pages 4-5, see pages 7-9 for the active ingredients, and see page 17, lines 13-26 for

claimed b. The mean particle taught by the document is within the claimed range. See paragraph bridging pages 17-18 for the various saccharide or sugar alcohols. See page 25 for wicking agent. Some of the agents are the species claimed under c as well as d. See the same page, lines 13-20 for povidone of claimed d. See examples and see specially where the document teaches using both c and d into the compositions.

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to prepare rapidly dosage forms using all the ingredients of WO document. One of ordinary skill in the art would have reasonable expectation of success that the claimed dosage form with ingredients would also dissolve rapidly since using ingredient c helps in transport moisture into the dosage form, and the use of ingredient b helps in the production of a hard, non-friable, directly compressible and rapidly dissolvable in-mouth dosage form. Absent a showing the criticality of the claimed range of the sugar alcohols, the claims are rendered *prima facie* obvious over WO document.

Claim 33 is rejected under 35 U.S.C. 103(a) as being unpatentable over WO 90/46215 ('215) as applied to claims 12-13 above, and further in view of U. S. Patent 6,923,988 ('988).

WO as applied above. The difference is WO document does not teach the claimed active ingredients. However patent '988 teaches solid carriers for improved delivery of active ingredients in pharmaceutical compositions. See the abstarcat, see col.s 4-8 for the active ingredients, see claim 29 for the claimed pioglitazone. Accordingly, it would have been obvious to one of ordinary skill in the art to use the claimed pioglitazone of patent into the compositions of WO document. One of ordinary skill in the art would be motivated to use the specific active ingredient with the reasonable expectation of success that the compositions with the specific

active ingredient would dissolve rapidly and also increase the bioavailability of the active ingredient. This is a *prima facie* case of obviousness.

Response to Amendment

The declaration under 37 CFR 1.132 filed 9/19/06 is insufficient to overcome the rejection of claims 12-13 based upon WO 90/46215 ('215) as set forth in the last Office action because:

1. Examples 2-4 recite only particle size of 45 microns (see page 2 of the declaration)
2. Examples 2-4 do not recite particle size of 130 microns. This is also true for example 8. There is no particle diameter of 130 microns in example 8 (see page 2 of the declaration)
3. Examples 5-7 do not recite particle size of 130 microns (see page 2 of the declaration)
4. Examples 10-12 and 14-15 recite larger particle size and the particle size mentioned at page 2 of the declaration correspond to sugar alcohols that are pulverized. *None of the claims recite that the sugar alcohols are pulverized.*
5. All the examples are specific to active ingredient. Claims 12-13 do not recite active ingredient.
6. Therfore the results are not commensurate with the scope of particle diameter of the sugar alcohols.

Note that there is overlap with the particle diameter claimed and the particle diameter disclosed in the WO document with respect to sugar alcohols. Therefore WO document is also

expected to give the solid preparations meeting the criteria of fluidity during tableting, binding property, adhesion to punch, hardness and intra oral disintegration time.

In view of the above reasons, the declaration is ineffective.

The declaration is ineffective therefore rejection of claim under 35 U.S.C. 103(a) as being unpatentable over WO 90/46215 ('215) as applied to claims 12-13 above, and further in view of U. S. Patent 6,923,988 ('988) is also maintained.

Response to Arguments

Applicant's arguments filed 6/19/07 have been fully considered but they are not persuasive.

See below for the data in the declaration, which was submitted on 9/19/06.

5. In order to show that an intraorally quickly disintegrating solid preparation having excellent properties can be obtain by using a saccharide or sugar alcohol with a mean particle diameter of 30 μm to 300 μm without any problem in productivity, the mean particle diameter in Examples and Comparative Examples disclosed in the above-identified application are summarized below.

<u>Example and Comp. Ex. Nos.</u>	<u>Saccharide/ sugar alcohol</u>	<u>Mean particle diameter (μm)</u>
Example 1	D-mannitol	130
Example 2	D-mannitol	45 and 130
Example 3	D-mannitol	45 and 130
Example 4	D-mannitol	45 and 130
Example 5	D-mannitol	130
Example 6	D-mannitol	130
Example 7	D-mannitol	130
Example 8	lactose/D-mannitol	80 and 130
Example 9	trehalose	44
Example 10	trehalose	185
Example 11	erythritol	178
Example 12	xylitol	135
Example 13	maltitol	181
Example 14	erythritol	75
Example 15	sorbitol	43
Comp. Example 1	D-mannitol	21
Comp. Example 2	D-mannitol	21

In response to items 1-3 of final rejection, applicants point out that examples 1-3 and 5-7 use 130 microns for mannitol. The examiner agrees, however this particles size is for mannitol only and not for any other sugar alcohol or any saccharide (emphasis added).

In response to item 4, applicants argue that the requirement that sugar alcohols be pulverized is unnecessary. The instant claims require that the mean particle diameter of the saccharide or sugar alcohol be in the range of 30 microns to 300 microns.

In response to the above argument, applicants are relying on examples to show that the results are unexpected and superior. Note that in examples 2-4 and 5-7 D mannitol is not pulverized, whereas in examples 10-12 and 14-15 the sugar alcohols are pulverized. The sugar alcohols are different for each example.

Comparative example uses only mannitol and the particle size tested for comparative example is 21 microns and this is less than the claimed 30 microns. There is no data for mannitol with claimed particle size of 30 microns, which is closer to comparative example having 21 micron size. There are no comparative examples using lower particle size and all the saccharides and sugar alcohols claimed.

Note that there is overlap with the particle diameter claimed and the particle diameter disclosed in the WO document with respect to sugar alcohols. Therefore WO document is also expected to give the solid preparations meeting the criteria of fluidity during tabletting, binding property, adhesion to punch, hardness and intra oral disintegration time.

The showing is not commensurate with the particle size for all the sugar alcohols or saccharide.

The declaration is ineffective therefore rejection of claim under 35 U.S.C. 103(a) as being unpatentable over WO 90/46215 ('215) as applied to claims 12-13 above, and further in view of U. S. Patent 6,923,988 ('988) is also maintained.

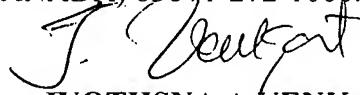

All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JYOTHSNA A. VENKAT Ph. D whose telephone number is 571-272-0607. The examiner can normally be reached on Monday-Friday, 10:30-7:30:1st Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, MICHAEL WOODWARD can be reached on 571-272-8373. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
